

LoXX, the remote control for your door!

The LoXX ONE® unlocks your door with only one press on the remote control.

- LoXX fits on present cylinder-operated mortise lock
- Locks the door automatically
- In emergency guaranteed escape route
- Batteryfed, no hassle with wiring
- Safe, Mountingplate is SKG ✓ approved
- Cylinder is SKG** approved

How does the LoXX ONE® work?

The LoXX ONE® works with a remote control. This is done as follows. The remote control gives a signal to the motor in your LoXX ONE® to turn the key so to speak. You go in and close the door behind you. The lock observes this and automatically double-locks the door. After this you hear a sound signal, so you are certain that the door has

been locked. Escaping is no problem, you can quickly open the door using the remote control, by turning the emergency button or pressing the wall switch (optional).

Remote Control

In every LoXX ONE® set there are two remote controls and one programmingtransponder. With your own red programmingtransponder you can program new remote controls into your LoXX ONE® set. The programming can also be used to remove lost remote controls out of your LoXX system. You can program up to 200 remote controls into the LoXX ONE®. In technical error you

can always unlock your door with the mechanical key placed inside your remote control.

Backdoor setting

On the backdoor you can program the LoXX ONE® that it won't lock automatically. This setting is convenient when you are outside in your garden to fetch something. With the backdoor setting you need to press your remote control to lock the door. This setting is also programmable on your front door.

Safe

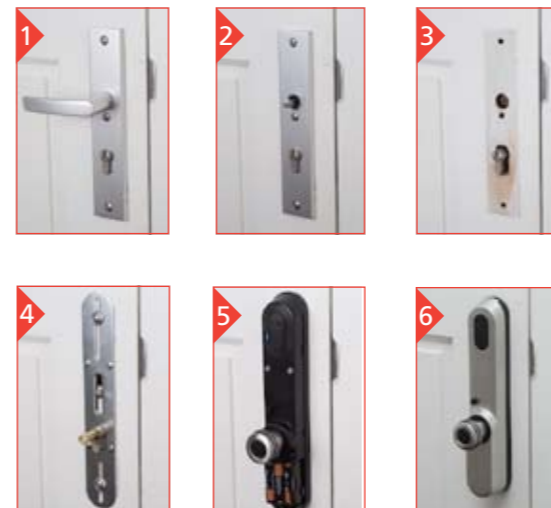

The LoXX meets the Dutch SKG quality demands, which stand for optimal burglar safety, quality and durability. Moreover, this product is suitable for use within the "Politie Keurmerk Veilig Wonen" (PKVW)®. Additionally, the SKG (Stichting Keurmerk Gevelementen) has issued a conformity statement, which includes the statement that safety shields in combination with

LoXX, the remote control for your door!

the LoXX will keep their SKG hallmark. The LoXX can be applied in cladding units that must meet NEN-5096, class 2. This product is also EMC approved and meets all European directives. The CE conformity has been demonstrated and the official documents have been deposited with LoXX.

Simple installation

- 1 Current situation
- 2 Remove current fitting and cylinder
- 3 Place the LoXX cylinder
- 4 Mount the current innershield in combination with the mountingplate
- 5 Mount the LoXX with the four screws
- 6 Place the LoXX cover

A screwdriver is the only tool you'll need to mount the LoXX ONE®. The mounting procedure can be done by every handyman. The LoXX ONE® fits on every cylinder-operated

mortise lock or multipoint lock with a PC-size (profile-cylinder size) between 55 and 92 mm. The LoXX ONE® is strong enough to open your door with multipoint locking system, when this closes without obstruction. The mandrel of your door must be at least 50 mm.

Contents of the LoXX ONE® set

The LoXX ONE® set is being delivered with cylinder, batteries, two remote controls, programmingtransponder and the mounting plate.

Optional Wall switch

With the wireless wall switch it's possible to open your door quickly once you arrive at home. Someone is at your door, rings the bell you walk up to the door press the wall switch and the door opens. In a fire you'll have a guaranteed, fast and safe escape route. The wall switch is provided with LED lighting, when you press the wall switch it will give you a clear signal that the door is being opened.

LoXX, the remote control for your door!

Upgrades for your standard LoXX ONE® with multiple peripheral devices.

It is possible to upgrade your standard LoXX ONE® set with a communicationprint which gives your LoXX the opportunity to communicate with multiple peripheral devices. All these upgrades are wireless which is profitable in the installation process. Below we have stated some of the possibilities. Your dealer can provide you with more information.

Automatic door closer

With the wireless connection between the LoXX ONE® and your automatic door closer the door swings open after unlocking the lock by the LoXX ONE®. This feature is useful when you can't open the door yourself. The time it takes to close and re-lock your door again can be configured by yourself. The LoXX ONE® communicates wirelessly with your door closer which is profitable in the installation process.

Bluetooth access control

When your mobile telephone has Bluetooth then it's possible to open and close your door with the Sorex wirelessKey. When you arrive at your door your configured mobile telephone is recognized by the wirelessKey. A verification code is sent once approved the wirelessKey will tell the LoXX ONE® to unlock your door. No additional software is needed on your telephone. The range of the wirelessKey can be configured by yourself, from several centimeters up to approximately 12 meters. The door can be unlocked automatically on approach, or by code verification on your mobile telephone.
